Supplemental
DETAILED ACTION

1. This action is responsive to RCE amendment filed 08/20/2004 and 312 amendment received 1/10/2005.
2. The disposition of the claims is as follows: claims 1-6, 8-36, 38-59 are pending in the application. Claims 1 30, and 59 are independent claims. Claims 7 and 37 were cancelled.

Claim Rejections - 35 USC § 112

3. In view of the amended claims 112 rejections are withdrawn.

Claim Rejections - 35 USC § 102 and 103

4. In view of amended claims and review of cited references and an updated search for prior art, 102 and 103 rejections are withdrawn.

Response to 312 Amendment

5. The amendment filed on 1/10/2005 under 37 CFR 1.312 has been entered.

Allowable Subject Matter

6. Claims 1-6, 8-36, 38-59 are allowed.
7. The following is an examiner's statement of reasons for allowance:

Applicant's amended independent claim 1 stands novel over the related prior art. For instance, while the related art of Sakamoto (U.S. Patent Number 6,201,550B1), does make use of gradation generation unit that sets a plurality of adjacent band-like regions which are

Art Unit: 2676

perpendicular to a straight line connecting a start point with an end point and in which color values therein become uniform by using the vector of the changing direction of the transferred color and the color information at the start and endpoints, obtains the intersection point between the boundary of the band-like region and the scanning line, and sets such intersection point as the color changing point. However does not require two distinct sets of attribute values, each defining a smooth transition between points on a gradient. The first set of attribute values define a smooth transition between a gradient starting point and at least one intermediary point. The second set of attribute values defines a smooth transition between at least one intermediary point and a gradient ending point. Therefore, the definition of the smooth transition between the gradient starting point and the at least one intermediary point is different from the definition of the smooth transition between the at least one intermediary point and the gradient ending point, and wherein the starting point, ending point, at least one intermediary point, and first and second set of values are defined by receiving user input as claimed in amended independent claims 1, 30, and 59.

Therefore as claimed by the combined elements of amended independent claims 1, 30, and 59, the cited references and prior art of record lack separately and in combination the elements of amended claims.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
